- *Request access to applications for self and others*
- *Approve access with built in approvals*
- *Business activity transparency*
- *Separation of duty validation*
- *Automated access provisioning*
- *Access certification*
- *Comprehensive audit trails for access requests*

## IBM Security Identity Governance Integration Application for ServiceNow

ServiceNow has been integrated with IBM Security Identity Governance and Intelligence (IGI) in the form of a new application. This application helps users facilitate requests in the ServiceNow interface they are accustomed to, paired with comprehensive governance capabilities from IGI keeping them secure. All request activities have been brought together in a single platform, powered by the ability to make informed decisions using detailed identity insights.

This application allows you to securely request application access for yourself or others through ServiceNow. Access requests are approved within ServiceNow and fulfilled within IGI. The status of requests from submission through fulfillment can be viewed in ServiceNow with a comprehensive audit trail. You can launch recertification tasks within IGI through the application and incidents can automatically be generated in ServiceNow to fulfil access revocation tasks.

### **The ultimate single platform for access requests, with IGI removing any surprises for business users**

#### **Consistent User Experience**

The IBM Security Identity Governance Integration Application allows customers who already have ServiceNow to leverage their existing user interface and extend their current capabilities to cover any IAM request. Business users don't have to switch platforms to have a consistent user experience!

#### **Greater Time to Value**

The IBM Security Identity Governance Integration Application provides a native plugin to ServiceNow. It is convenient and easy to use without any development work. Once you download the app you are ready to go!

#### **SoD Validation Checking**

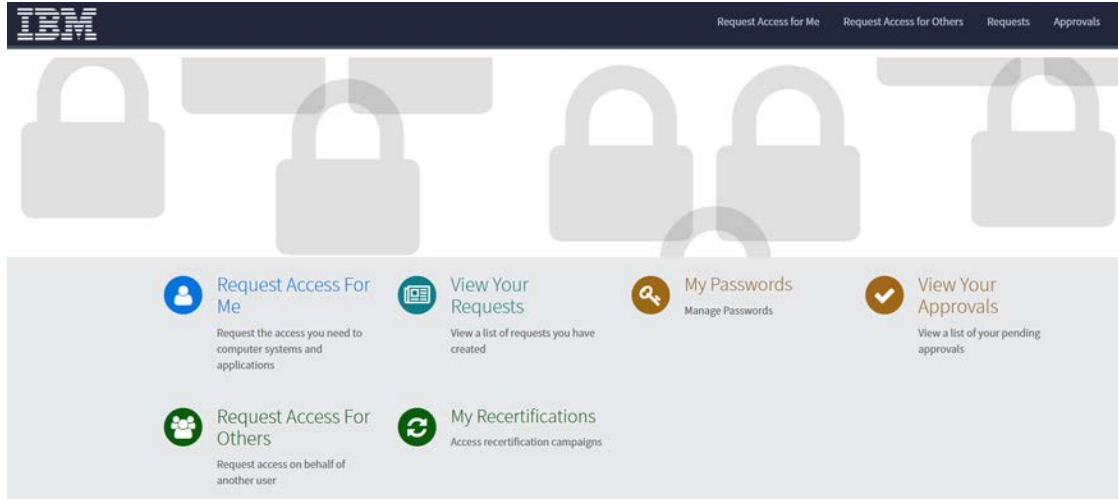

The IBM Security Identity Governance Integration Application provides ServiceNow users access to differentiated IGI capabilities. For example, IGI uses a unique business activity-based approach to model separation of duties violations that enables a very clear way of showing risk.

## Use ServiceNow to simplify the process of requesting application access and Identity Governance & Intelligence to perform access recertification

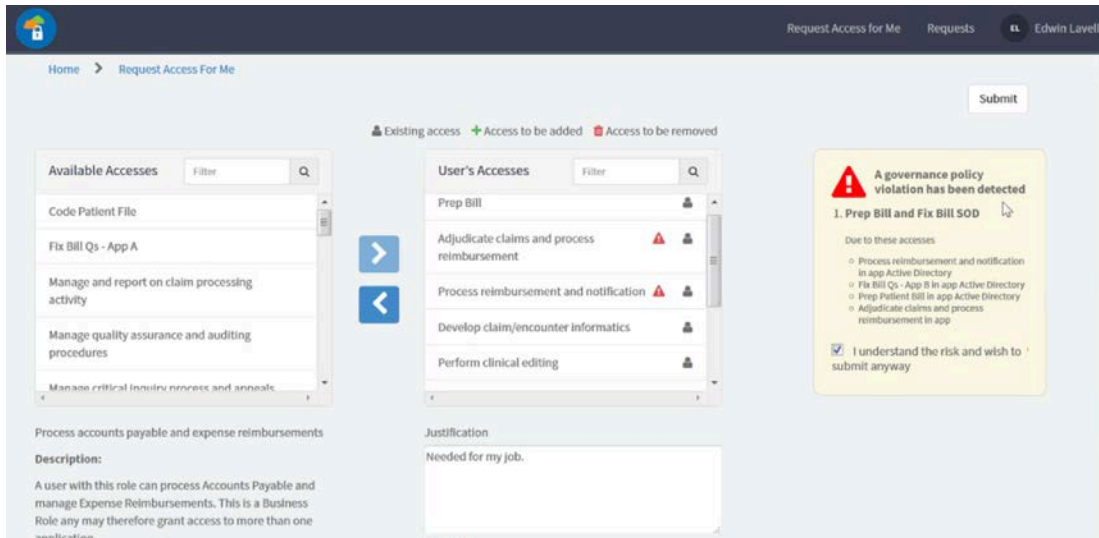

### Get Started Today

Before downloading this application, you must have working environments of IBM Security Identity Governance and Intelligence and ServiceNow Jakarta instance.
